Nissan accelerator pedal position (APP) sensor WHAT IS APP? The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM. Accelerator pedal position sensor has two sensors.

Nissan accelerator pedal position (APP) sensor

The sensor that makes up the APP sensor unit is called a potentiometer (mounted on the accelerator pedal). In some sensors, there is also a second and third sensor to make up the APP sensor unit. In terms of a hierarchical system, the first sensor is the main input to the full throttle.

The APP sensor essentially tells your engine how fast or slow to drive when you press the gas pedal. When you press down or lift off the throttle, it sends an electrical signal to the vehicle's engine control unit (ECU), and then transmits that signal to the fuel system.

Symptoms of a Bad or Failing Throttle/Accelerator Pedal ...

Sometimes, a bad sensor may trigger the check engine light (CEL). If a trouble code has been stored on the computer memory indicating a problem with the MAP sensor, it's a good idea to actually test the sensor to confirm that the problem lies with the sensor and not some other related component.

Symptoms of a Bad MAP Sensor, and How to Test One ...

A failed MAP sensor has serious implications on fuel control, vehicle tailpipe emissions and fuel economy. Symptoms of a bad or failing MAP sensor include: 1. Excessive fuel consumption. A MAP sensor that measures high intake manifold pressure indicates high engine load to the PCM. This results in an increase of fuel being injected into the engine.
