Lung cancer is the leading cause of cancer death, accounting for 24% of all cancer deaths. Is cancer increasing or decreasing? Cancer death rates decreased every year during the past 20-year data period (1999 to 2018). Cancer death rates are higher among males than females, although this gap has narrowed over time.

### An Update on Cancer Deaths in the United States | CDC

Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.

Cancer mortality can be reduced if cases are detected and treated early. There are 2 components of early detection: Early diagnosis. When identified early, cancer is more likely to respond to effective treatment and can result in a greater probability of surviving, less morbidity, and less expensive treatment.
