## **APHERESIS MANUAL Policy and Procedure**

Apheresis refers to the process of separating the cellular and soluble components of blood using a machine.

# Acces PDF Apheresis Machine Manual

Apheresis is often done on donors where whole blood is centrifuged to obtain individual components (eg, red blood cells [RBCs], platelets, plasma based on specific gravity) to use for transfusion in different patients.

## **Platelet Collection System - Haemonetics**

An apheresis machine is a complex device used in the process of apheresis. Apheresis is a procedure through which donated blood is passed via a tubular system, glycerolized, deglycerolized and then poured into single- use closed bag for storage. A bag with the blood can be then used for transmission

purposes.

## **Apheresis machines - equipment list, suppliers ...**

Therapeutic apheresis is a therapy for removing pathogenic substances from blood using filters and adsorbers. This can lead to a medical improvement when other treatment options have reached their limit. In contrast to conventional

# Acces PDF Apheresis Machine Manual

therapies, therapeutic apheresis focuses on “washing” harmful components out, instead of supplying substances.
