In 1998, Boeing again heavily revised the 737, with the 600, 700, 800 and 900 variants, designated 'NG' (Next Generation). These aircraft featured FADEC controlled CFM56-7 high-bypass turbofan engines, larger and more efficient wings (without winglets in some cases), a strengthened fuselage, revised avionics, and a higher cruise speed.

After the ground crew have disconnected, the Captain performs a control check. The F/O selects take-off flap, and does the overhead panel, including start switches for take-off and checks the master caution system. The Before Taxi checklist is then read by the F/O. Before Take-off Procedure

### **New Normal Procedures - The Boeing 737 Technical Site**

Optimal performance was achieved during the takeoffs from Paro by accelerating the airplane to a speed that was 10 kias faster than the minimum safety takeoff speed (10 kias of improved climb). This allowed for 30 deg of bank angle and provided the climb gradient necessary to initiate the turnback.
