Ultimate route - a routing table entry that contains either a next-hop IPv4 address or an exit interface. Directly connected, dynamically learned, and local routes are ultimate routes. Parent route - a level 1 network route that is subnetted. Level 2 child route - a route that is a subnet of a classful network address.

It can function as a default route, supernet route or network route. A level 2 route is a route that is a subnet of a classful network address; the source can be a directly connected network, static route or a dynamic routing protocol; considered an ultimate route because they contain the next-

hop IP address or exit interface Craig a makes good point as he explains how during lookup process router will choose longest match when determining which direction to send packets.
