biology chapter 4 study guide. STUDY. ... Weather is the day-to-day condition of Earth's atmosphere. Climate refers to average conditions over long periods and is defined by year-after-year patterns of temperature and precipitation. List the factors that contribute to Earth's climate.-solar energy trapped in the biosphere

**biology chapter 4 study guide Flashcards | Quizlet**  
Deforestation, cement manufacture, animal agriculture, the clearing of land, and the burning of forests are other human activities that release carbon dioxide. Methane (CH 4) is produced when bacteria break down organic matter under anaerobic conditions. Anaerobic conditions can happen when organic matter is trapped underwater (such as in rice paddies) or in the intestines of herbivores.

**Climate Change | Biology for Majors II**  
This report is an authoritative assessment of the science of climate change, with a focus on the United States. It represents the second of two volumes of the Fourth National Climate Assessment, mandated by the Global Change Research Act of 1990.

This build-up in the atmosphere is like a tub filling with water, where more water flows from the faucet than the drain can take away. Methane(CH4) is produced through both natural and human activities. For example, wetlands, agricultural activities, and fossil fuel extraction and transport all emit CH4.
