interrupts active Low?

Answer: The reason for most signals to be active low is as below:

If you consider transistor as an example, active low means the capacitor in transistor output terminal will get charged or discharged based on signals from low to high or from high to low transitions respectively.

Digital Signal Processing Notes PDF, Syllabus | B Tech 2020

When I began studying

Where To Download Digital Signal Processing Questions Answers

DSP (Digital Signal Processing), I was confounded by all the transformation of signals. There was the Laplace transform, the Fourier transform, and the Discrete Fourier transform and the z transform. Then there were all these planes like the s -plane, the z -plane, which looked a lot like the normal x - y axes of the familiar cartesian plane.
