Welcome to STAT 504 - Analysis of Discrete Data! The focus of this class is a multivariate analysis of discrete data. Here we deal with data which are discretely measured responses such as counts, proportions, nominal variables, ordinal variables, discrete interval variables with few values, continuous variables grouped into a small number of ...

Discrete Data Analysis with R by Friendly, Michael (ebook)

Analysis of data obtained from discrete variables requires the use of specific statistical tests which are different from those used to assess continuous variables (such as cardiac output, blood pressure, or PaO₂) which can assume an infinite range of values. The analysis of continuous variables is discussed in the next chapter.
