Arid and Semi-Arid Agriculture Prone to drought and with scarce water resources, agriculture in arid and semi-arid regions has unique characteristics and demands. Specific techniques, management practices, and techniques can be used to adapt to the presence or lack of water and moisture for growing crops. Our faculty are experts in:

Arid and Semi-Arid Agriculture | Department of ...

Small-scale rain-fed agriculture is the main livelihood in arid to semi-arid regions of sub-Saharan Africa. The area is characterised by erratic rainfall and frequent droughts, making the capacity for coping with temporal water shortages essential for smallholder farmers.

Adaptation to drought in arid and semi-arid environments ...

Drought is a common occurrence in arid and semi-arid (ASA) regions, with regions such as Australia's Murray-Darling River Basin (MDB, Figure 1) experiencing significant droughts once every ten years on average. Climate projections for many ASA regions suggest a future with increased aridity, longer periods without precipitation, and more frequent and intense meteorological drought (Seagar, et al. 2007).

Choices Magazine Online

In arid and semi-arid regions, drought is a common limiting factor on NPP. Drought was described as a complex natural disaster and not been identified yet precisely and universally (Wilhite and Donald, 2000). Drought events influence the plant development and leading to substantial reduction in plant growth rate and biomass accumulation.

Impact of drought on vegetation carbon storage in arid and ...

Drought is a non-permanent and repeating phenomenon, which occurs due to deficiency of precipitation over an extended period of time (Patel and Yadav, 2015), as compared to long-term average conditions and it is prevalent and more frequent especially in semi-arid ecosystems. Agricultural drought refers to a reduction in the production of crops due to unreliable rainfall and inadequate soil moisture in the crop root zones (Gidey et al., 2018).

GIZ has a programme in place, called the Strengthening drought resilience (SDR) programme to help facing this situation. Furthermore, GIZ in collaboration with the Ethiopian Ministry of Agriculture, Livestock and Natural Resources, has developed the "Strengthening Drought Resilience in Arid and Semi-Arid lands" (SDR-ASAL) program.

EO Clinic: Strengthening Drought Resilience in Arid and ...

Abstract. Water is the most important resource for sustainable agriculture in arid and semi-arid regions, where agriculture is the mainstay for rural societies. By relating the water usage to renewable water resources, we define three stages from sustainable to unsustainable water resources: (1) sustainable, where water use is matched by renewable water capacity, ensuring sustainable water resources; (2) transitional, where water use occasionally exceeds renewable water capacity; and (3) ...
