ETHICAL GUIDELINES  
FOR EPIDEMIOLOGICAL  
STUDIES

“Epidemiology is the study of the distribution and determinants of health-related states or events in specified populations, and the application of this study to control of health problems.” (John Last, Dictionary of Epidemiology, 4th edition).

The current text closely follows the content and format of the

International Ethical Guidelines for Biomedical Research , and the differences are not readily identified.

The epidemiology guidelines, however, are obviously useful for non-US researchers who come under the

One of the most basic ethical principles of medicine and epidemiology is the moral obligation to cause no harm to participants (non-maleficence), whether physical or psychological.

Although the risk in an epidemiological investigation is usually minimal, most people
