You're likely to use your mini-split system more often if you live in an extreme climate, so choosing an energy-efficient mini-split will be more critical. Look for a unit with a high seasonal energy-efficiency ratio, or SEER. Most mini-split systems will work in climates as cold as -15 degrees and as warm as 115 degrees Fahrenheit.

Split AC System - The Condensing Unit. The condensing unit, or condenser, is the part of a split air conditioning system that is located outside. In its simplest explanation, an air conditioner uses electricity to take the heat from inside of your house, and transfer it outside (making the inside of your house cooler).

As cooling systems, an air conditioner and a heat pump system are very similar, drawing heat from the air inside your home and releasing it through an outdoor unit. But, unlike an air conditioner, a heat pump can reverse the process, heating your home by collecting heat from seemingly cold outside air and releasing it inside.

How a Ductless Mini-Split System Works. A mini-split system uses an outdoor unit and one or more indoor units attached to the wall or in the ceiling. They're joined by a refrigerant line that stretches through a small hole in the wall. Mini-splits are zoned systems. This allows you to change heating or cooling in an individual space.
