students taking a first course in the subject.

The presentation stresses analytical methods, concrete examples, and geometric intuition.

The theory is developed systematically, starting with first-order differential equations and their bifurcations, followed by phase plane analysis, limit cycles and their bifurcations, and

Nonlinear dynamics and chaos. Dynamics and nonlinear systems concerns the study of things which change over time. This includes, for example, the study of chaos and bifurcations using analytical, numerical and experimental methods. Applications include nonlinear vibrations (MEMS, lasers), celestial
