...

Integrated research can help understand the physiological pathways of alcoholic liver disease, says Dr Shilpa Chokshi, of the Foundation for Liver Research. Alcohol is one of the most frequently abused substances in the world and when consumed at harmful levels, which the UK Chief Medical Officer defines as more than 14 units a week, it is responsible for more than 3.3 million deaths annually, an estimated 5.9% of all deaths globally.

Liver Disease News -- ScienceDaily

Given organ shortages and social and cultural concerns about alcohol use, transplantation for patients with alcoholic liver disease (ALD) remains controversial. Ethical concerns pertain to equity and utility in the allocation of scarce resources and social stigmatization of patients with a disease that is thought to be self-inflicted [1-5].
