This control system is a stand alone, fully-integrated kit designed to run Chevrolet Performance Parts LS Series crate engines with 58x crankshaft reluctor wheels, 4x camshaft indexing, and electronic throttle control (ETC) - typically 2006 and newer.

LS Series Crate Engine Control System

The system was first offered only on passenger cars, since the heavy demands of trucks would interfere with its operation. However, it was recalibrated for 2006 and was offered on all seven models, including SUV's and 1500 series trucks, using the 5.7 L engine. Chrysler expected that the technology would boost economy by 10% to 20%.

A water-cooled engine block and cylinder head have interconnected coolant channels running through them. At the top of the cylinder head all the channels converge to a single outlet. A pump, driven by a pulley and belt from the crankshaft, drives hot coolant out of the engine to the radiator, which is a form of heat exchanger.

Main engine lubricating oil system – This system supplies lubricating oil to the engine bearings, and cooling oil to the pistons. Lubricating oil is pumped from ME LO Circulating Tank, placed in the double bottom beneath the engine, by means of the ME LO Pump, to the ME LO Cooler, a thermostatic valve, and through a full-flow filter, to the engine, where it is distributed to the various branch pipes.

The T-53-L-13 engine is a Free Power type turbine. Free power indicates that engine operation involves two mechanically independent internal stages (systems). The compressor rotor and gas producer turbine rotors makeup the n 1 stage, and the power turbine rotors with their output power shaft makeup the n 2 stage. The symbol ' n ' refers to rotation (rpm) of the two independent stages.

The function of the diesel fuel system is to inject a precise amount of atomized and pressurized fuel into each engine cylinder at the proper time. Combustion in a diesel engine occurs when this rush of fuel is mixed with hot compressed air. (No electrical spark is used as in a gasoline engine.) The fuel system consists of the following components.
