Stanag 4539

STANAG 4539 or MIL-STD-188-110B/C Appendix C is a HDR (110B) / MDR (110C) serial PSK / QAM signal that can reach speeds up to 9600 bps (12800 bps with no interleaving). In 110B, this was designated as High Data Rate, but in 110C, this mode was recategorized Medium Data Rate.

The STANAG 4539 (Edition 1) “Technical Standards for Non-Hopping HF Communications Waveforms” was released in Jun 2005.

STANAG 4539 | RapidM

STANAG 4539 standard provides a family of coded data rates from 75 to 9600 bps and an uncoded data rate of 12k8 bps. In addition, these waveforms incorporate AUTOBAUD. STANAG 4539 is an attractive choice for Automatic-Repeat-Request (ARQ) systems. For this waveform the RM6 modem supports the DTE modes Standard Async, High-speed and synchronous.

Standard HF Waveform Performances | RapidM

MIL-STD-188-110A/B, FED-STD-1052 and STANAG 4539. The mode consists of several sub modes (75-2400 bps) and two different interleaving options (short and long). 75B is the frequency hopping variant and all the others are fixed mode

variants. The receiver should be in USB mode and provide flat

STANAG 4539 Decoder - Pervisell

Recently, some friends and me happened to run into QPSK and 8PSK burst waveforms that are among those described by STANAG-4539 for TDMA operations (Time Division Multiple Access) and that are used by NILE/Link-22. Even if I do not have a direct confirmation, my prudent guess is that it is probably about Link-22 transmissions.

This system has been copied on 9 different simultaneous channels from ~6200 to ~6400 KHz on USB during 9 June morning. The analysis reveals it's a STANAG-4539 modem (frame length is 287 PSK-8 symbols) running at different data signaling rates at constant 2400Bd data rate. The system uses bursts and (possibly) ARQ mode.
