The Adult and Pediatric Spine: An Atlas of Differential ...

Besides the anatomical and radiologic differences of the pediatric spine there is also a difference in the biomechanics between the adult and pediatric spine. These biomechanical differences are the results of increased flexibility, relative muscle weakness, and incomplete ossification of the osseous components of the spinal column.

Anatomy of the pediatric spine and spine injuries in young ...

Both pediatric and adult spinal deformity surgeries are among the most expensive procedures offered today. With high variability in both outcomes and costs in spine surgery today, surgeons will be expected to consider long-term cost effectiveness when comparing treatment options.

Improving Complex Pediatric and Adult Spine Care While ...

Of course, the most obvious difference between an adult's and a child's spine is size. The younger the child; the smaller the spine. But, according to Dr. Anderson, that is not the least of it. The soft tissues in the spine, including ligaments and joint coverings, are more elastic.
