We aim to describe the epidemiology, trends, and costs of pediatric patients who present to US EDs with upper extremity injuries. Methods: Using the National Emergency Department Sample, we identified all ED encounters by patients aged <18 years associated with a primary diagnosis involving the upper extremity from 2008 to 2012. Patients were divided into 4 groups by age (≤ 5 years, 6-9 years, 10-13 years, and 14-17 years) and a trauma subgroup.

Pediatric Hand and Upper Extremity Injuries Presenting to ...

We perform over 1,000 hand and upper extremity surgeries each year on pediatric patients – more than any other hand surgery practice in the Southeast. We are the only surgeons in the Hand and Upper Extremity Program at Children’s Healthcare of Atlanta (CHOA) , we are the only hand surgeons at CHOA-Scottish Rite, and we partner with Scottish ...

Pediatrics | The Hand & Upper Extremity Center of Georgia

This is a repository of example radiographs (x-rays) of the pediatric skeleton by age. It was inspired by a similar project on UCSD's BonePit site. Ages are approximate (generally, +/- 3 months). These are NOT intended as bone-age references! Indeed, male and female subjects are intermixed.

Normal Bones

Differential diagnosis of nonidiopathic genu valgum includes traumatic or infectious partial physeal arrest, metabolic disorders (rickets), skeletal dysplasias, and tumorlike conditions (Ollier disease, multiple hereditary exostosis). Clinical examination shows symmetric valgus alignment at the knees.
